Initially, in our experiments, our purpose was to re-
produce the results described in the literature (some of
those experiments with copper cathode), as a second
step we carried out measurements to establish the op-
timal conditions for the reduction and finally we tried
a new cathode metal (experiments with aluminum cath-
ode). (Extract)

DESCRIPTORS: *Silver compounds, *Chlorides, Photoelectrons, Crystals, *Electrons, Conductivity, Drift, Motion.

In an examination of the characteristics of photoelectrons at room temperatures with the help of the Haynes-Shockley impulse method, an effect was noted in AgCl crystals subjected to a particular previous treatment, from which one can ascertain that it is caused by the wandering of defect electrons. An area appears through which a large number of photoelectrons pass. (Physics, TT, v. 8, no. 3) (over)
